Elections, Computer Security, and Electronic Voting

CS 334 Fall 2012
Thanks to
David Wagner,
UC Berkeley
for providing these
slides.

For Delegate to Congress. FRANCIS GEHON. For Representatives. John Firestow S.S. Lotheoh For County Commissioners. Abre Wolcott John Morford John Aigins byrus Sarders LB. Mulholland John Hawkers For Constable. John Boyal.

REPUBLICAN TICKET.

For Mayor, M. F. FAIRCHILD.

For City Solicitor, J. P. DOLLIVER.

For City Assessor, L. G. SPRING.

For City Treasurer, BETH VINCENT.

For Councilman-4th Ward, A. H. JOHNSON.

REPUBLICAN TICKET.

STATE TICKET.

For Governor,
WILLIAM LARRABEE,
Of Fayette County.
For Lieutenant Governor,
JOHN A. T. HULL,
Of Polk County.
For Judge of the Supreme Court,
GIFFORD S. ROBINSON,
Of Buena Vista County.
For Superintendent of Public Instruction,
HENRY SABIN,
Of Clinton County.

County Ticket

For Senator Thirty-sixth District,
J. P. PATRICK.

For Representative Seventieth District,
W. W. GOODWIN,
For Auditor,
JULIUS H. BUHLMAN.
For Treasurer

For Sheriff,
WILLIAM WELLMAN.
For County Superintendent,
JAMES W. WYATT.
For Supervisor,
PATRICK COSTIGAN.
For Coroner,
L. L. RENSHAW.
For Surveyor,
SANFORD L. PECK.

Township Ticket.

For Trustee,

For Constable,

For Road Supervisor District No.....

10th District.

ADMINISTRATION NION TICKET

> For Mayor, CALEB T. FAY

For County Judge. THOS. W. FREELON

For District Attorney. CHARLES H. PARKER

For County Clerk, JOHN A. MONROE

For Sheriff. THOMAS J. POULTERER

For Recorder, to fill the vacancy for the unexpired term of G. W. Beckh, resigned.

GEORGE B. REEVE

For County Recorder, GEORGE B. REEVE

For City and County Treasurer, ASA T. LAWTON

For City and County Assessor, THOS. D. MATHEWSON

For City and County Surveyor, REED BIGLER

> For Coroner DR. B. A. SHELDON

For Harbor Master

CAPT. N. PROCTOR SMITH

For Superintendent of Common Schools JOHN H. BREWER

"Subscription of Three Hundred Thousand Bollars, to the San Francisco and San Jose Railroad Company." YES.

Polls—Brick Building westerly side of Third, between Folson and Harrison streets.

Security Goals for an Election

· Integrity: No election fraud

 Transparency: Everyone must be able to verify that the election was conducted appropriately

 Privacy: No one learns how the voter has voted

 Secret ballot: Voter cannot prove how she voted

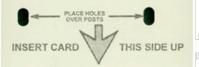

Breakthrough! — the Australian secret ballot.

Ballot printed by govt. Ballot boxes monitored by observers. Ballots counted, by hand, in public. Competing interests keep each other honest.

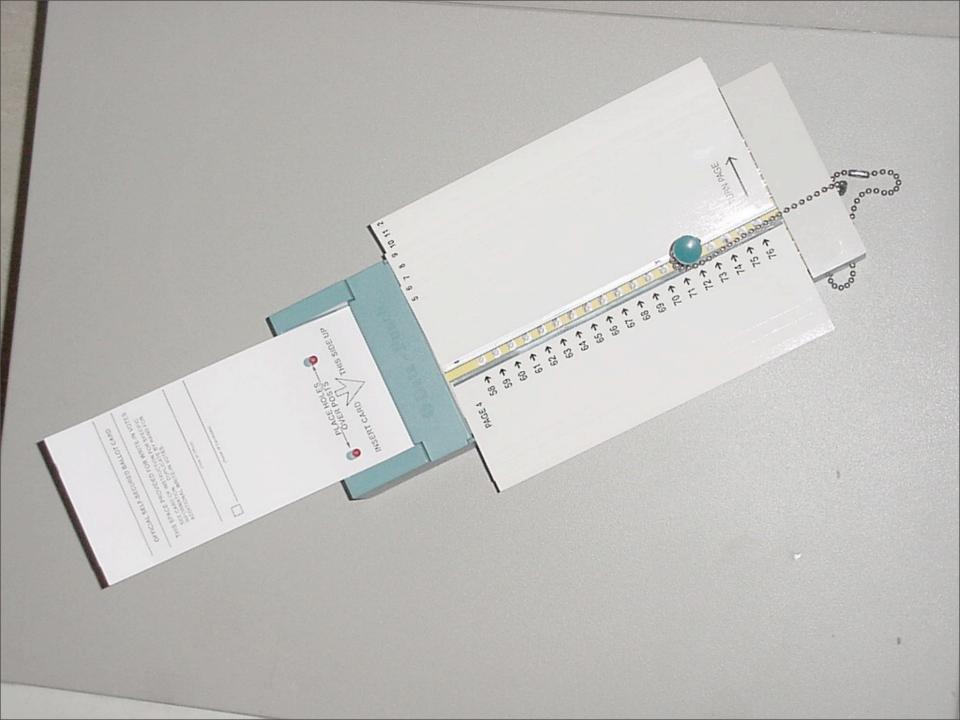

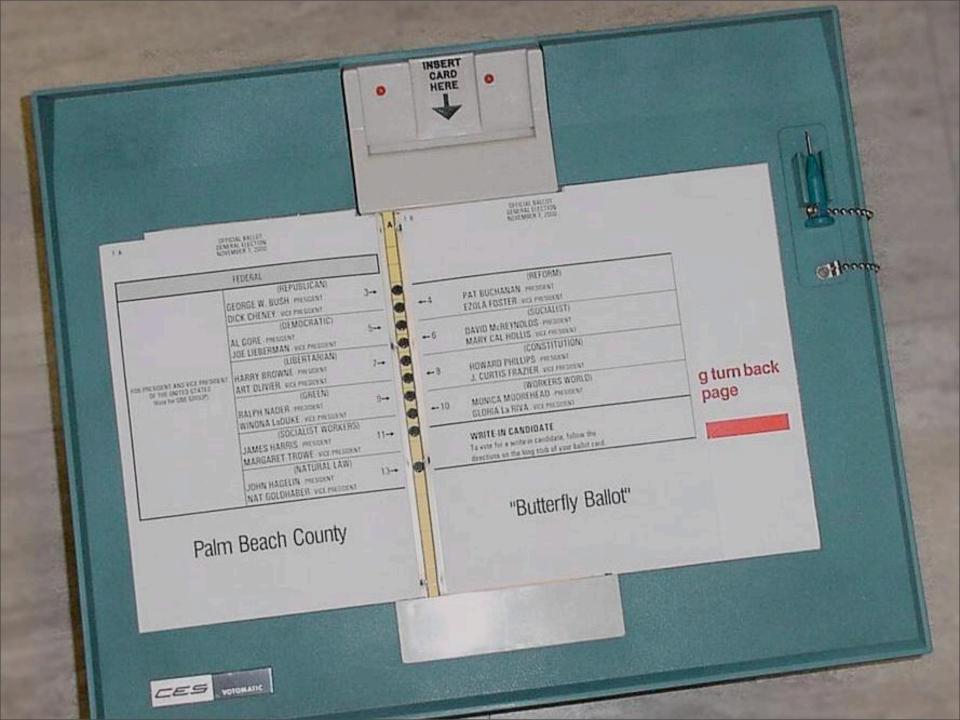

ABSENT VOTER BALLOT STUB A No. 7720

STUB B No. 7720 ABSENT VOTER BALLOT

IMPORTANT DO NOT DETACH STUB

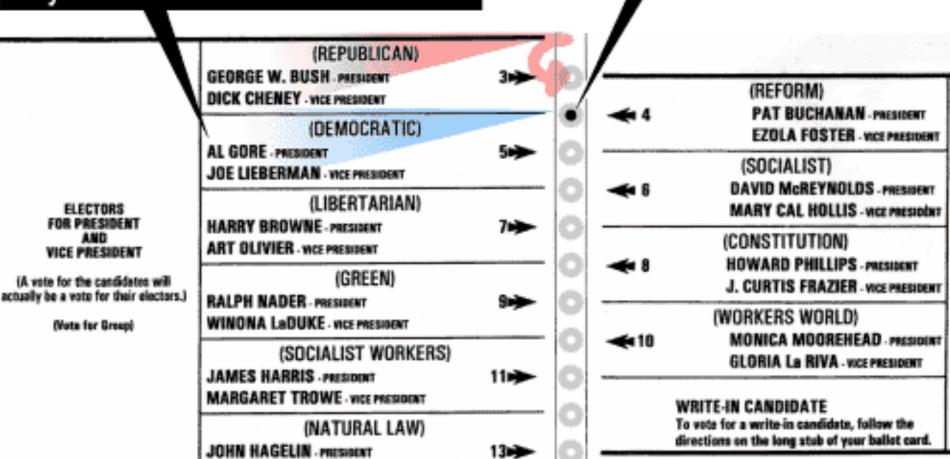

Confusion at Palm Beach County polls

Some Al Gore supporters may have mistakenly voted for Pat Buchanan because of the ballot's design.

Although the Democrats are listed second in the column on the left, they are the third hole on the ballot.

NAT GOLDHARER . VICE PRESIDENT

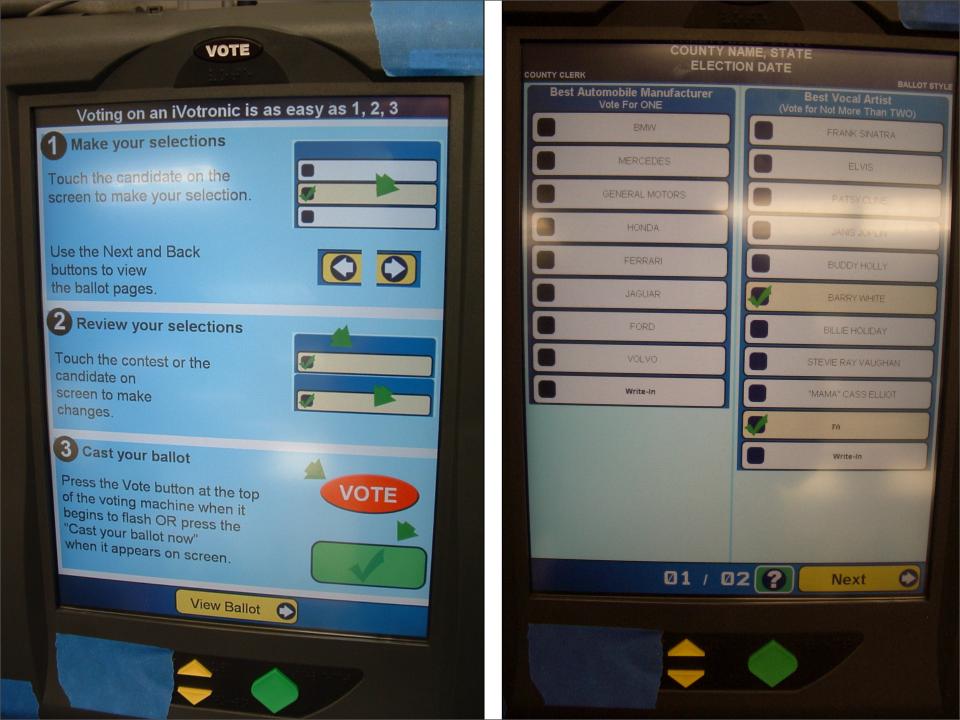

Punching the second hole casts a vote for the Reform party.

Press the candidate name or contest title to return to a contest.

Vote button will light up when you may cast your ballot.

Question: How do election security goals apply to touchscreen (DRE) electronic voting machines?

- 1. Machine must allow each authorized voter to vote exactly once; must prevent tampering with votes after they are cast.
- 2. Machine should be verifiably trustworthy.
- 3. Machine must randomize the order in which votes were cast.
- 4. Machine must not give voter a "receipt".
 - Security Goals for an Election:
 Integrity, Transparency, Privacy, Secret ballot

Nov 4, 2002:

Trojan Horses and the Insider Threat

Ronald Dale Harris

Employee, Gaming Control Board, 1983-1995

Arrested, Jan 15,1995 Convicted, Sept 23, 1997, for rigging slot machines

Attempted Trojan Horse in Linux Kernel

```
schedule();
      goto repeat;
if ((options == (__WCLONE|__WALL)) && current->uid = 0
      retval = -EINVAL:
retval = -ECHILD:
end_wait4:
current->state = TASK_RUNNING;
```

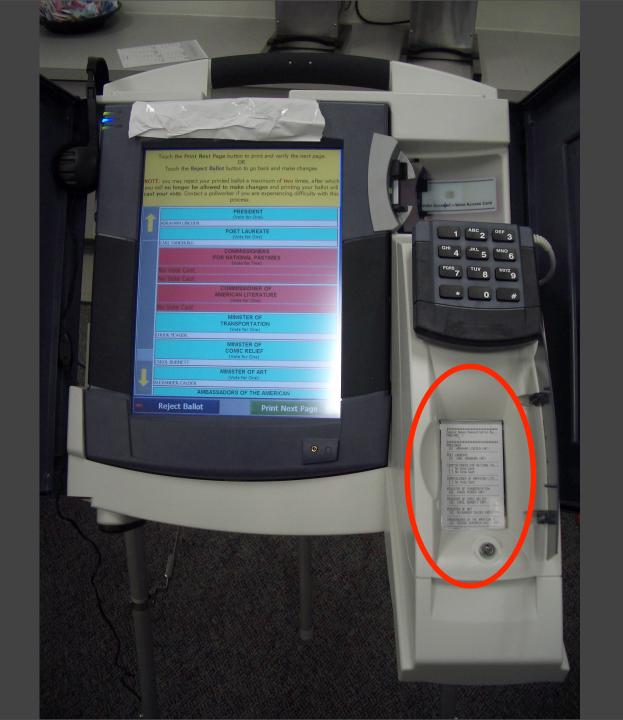

Trojan Horses and Voting Machines

Malicious logic hidden by an insider might, e.g., record votes incorrectly to favor one candidate. Extremely difficult to prevent or detect.

Potential solutions:

- Verify that the software is free of Trojans.
 (beyond the state of the art)
- Verify that output of the sw is correct.
 - · Voter-verified paper audit trail, 1% audits
 - Optical scan (paper ballots)
 - Ballot marking devices (paper ballots)

VOTE BOTH SIDES

FRONT Card I RptPct 10 "PRECINCT 1" English

Conclusions

- E-voting security is hard, because computers aren't transparent.
- All known solutions use paper. Secure paperless voting is an open research problem.
- Computer science is deeply relevant to democracy.
- Technical principles:
 - Two-person control, separation of duties
 - Statistical audit
 - Security against malicious insiders
 - Security through obscurity

More than 4,500 North Carolina votes lost because of mistake in voting machine capacity

JACKSONVILLE, N.C. (AP) — More than 4,500 votes have been lost in one North Carolina county because officials believed a computer that stored ballots electronically could hold more data than it did. Scattered other problems may change results in races around the state.

Officials said UniLect Corp., the maker of the county's electronic voting system, told them that each storage unit could handle 10,500 votes, but the limit was actually 3,005 votes.

Machine error gives Bush 3,893 extra votes in Ohio

By John McCarthy, Associated Press

COLUMBUS, Ohio — An error with an electronic voting system gave President Bush 3,893 extra votes in suburban Columbus, elections officials said.

Franklin County's unofficial results had Bush receiving 4,258 votes to Democrat John Kerry's 260 votes in a precinct in Gahanna. Records show only 638 voters cast ballots in that precinct. Bush's total should have been recorded as 365.

Broward Vote-Counting Blunder Changes Amendment Result

POSTED: 1:34 pm EST November 4, 2004

BROWARD COUNTY, Fla. -- The Broward County Elections Department has egg on its face today after a computer glitch misreported a key amendment race, according to WPLG-TV in Miami.

Amendment 4, which would allow Miami-Dade and Broward counties to hold a future election to decide if slot machines should be allowed at racetracks, was thought to be tied. But now that a computer glitch for machines counting absentee ballots has been exposed, it turns out the amendment passed.

The software is not geared to count more than 32,000 votes in a precinct. So what happens when it gets to 32,000 is the software starts counting backward," said Broward County Mayor Ilene Lieberman.

That means that Amendment 4 passed in Broward County by more than 240,000 votes rather than the 166,000-vote margin reported "embarrassing Wednesday night. That increase changes the overall statewide results in what had been a neck-and-neck race, one for which recounts had been going on today. But with news of Broward's error, it's clear amendment 4 passed.

Broward County Mayor Ilene Lieberman says voting counting error is an "embarrassing mistake."

November 8, 2004

George Gilbert Director of Elections Guilford County Board of Elections Greensboro, NC

Dear George,

As you know, Tuesday's election drew an unprecedented number of voters to the polls. This unanticipated level of voter participation was a challenge that we believe was managed very well in Guilford County.

On behalf of the team at Election Systems & Software, I would like to congratulate you and your staff on running a very successful election. And, all of us at ES&S want to thank you for the opportunity to partner with you to carry out our important roles in the democratic process. The success of this election was the result of a tremendous amount of hard work from everyone involved. Where challenges did arise, we worked together to address them quickly and effectively so the election process continued uninterrupted. The countless hours of preparation paid off, and all in all. it was a very good day.

One challenge we did face was the incorrect information contained in preliminary and unofficial returns for certain contests in the Guilford County "One Stop" precinct used to collect totals for early voting. As you know, this occurred because exceptional voter participation generated a number of ballots and votes cast that exceeded the capacity of single precinct vote counters accepting this amount of data in the Election Reporting Manager results reporting software.

This limitation in the results reporting software was previously documented and known to ES&S. To clarify further, the limitation has nothing to do with the Votronic tabulation systems. No votes were lost. All ballot data and vote counts were correctly captured and reported by the Votronic touch screen tabulation systems.

We regret any confusion the discrepancy in early vote totals has caused.

We would like to explain in further technical detail what caused this issue, should you or others at the county have questions. The 32,767 capacity limitation at a single precinct level is a function of the design and definition of the results database used by ERM. The data storage element used to record votes at the precinct level is a two byte binary field. 32,767 is 2 to the 15th power, which is the maximum number held by a two byte word (16 bits) in memory, where the most significant bit is reserved as the sign bit (a plus or minus indicator). Additionally, ERM precinct

Maintaining Voter Confidence. Enhancing the Voting Experience

Equal Opportunity Employer/Affirmative Action Employer

www.essvote.com

count level data is stored in a binary computer format known as two's complement. Data on ERM results reports are printed as the absolute value of the two's complement of the associated data in the ERM database. This means that once the 32,767 limitation is reached, additional incremental tallies of vote results would not be printed correctly (32,768 through 65, 536 would actually be represented as 65,536 to 32,768).

While this value, 32,767 is certainly higher than any practical value that could be tabulated in a single election day precinct, the consideration of reporting all absentee ballots or early voting into a single absentee or "One Stop" precinct does hold the possibility of yielding much higher totals than what may be possible in single election day precincts.

While the discrepancy in preliminary vote totals did cause some early confusion, it is very important to note that the final results reported to the state were accurate and complete. Final counts based on the Votronic systems and paper tapes were fully accurate and correct.

To avoid this limitation in elections where the One Stop early voting totals may exceed the 32,767 limitation, ES&S would recommend one of the following:

- Using the Unity EDM software, code multiple precincts to support the larger counts.
 Create a split for each ballot style for each precinct. Configure early voting terminals and follow vote collection procedures that would ensure no individual precinct totals would approach the 32,767 limitation.
- 2. Coilect early voting "One Stop" and other absentee votes into Election Day precincts.
- Upgrade systems and software to the Unity 2.5 or Unity 3.0 versions, when available in North Carolina. The ERM database has been expanded in these versions to accommodate vote totals in excess of millions of votes in any individual precinct.

Heretofore, in previous elections, Guilford County had configured, collected and distributed the early voting results into multiple separately defined precincts (as suggested above, avoiding this limitation). ES&S was not aware that this practice had changed. Had we been aware of this change, we would have advised Guilford County of this limitation and suggested one of the other configuration options.

ES&S shares Guilford County's commitment to making sure every vote cast is counted accurately. We are absolutely confident in the accuracy of the final results that were reported. If you have additional questions on this issue, please do not hesitate to contact me.

Sincerely,

Ken Carbullido Senior Vice President, Product and Software Development Election Systems & Software Inc.

We would like to explain in further technical detail what caused this issue, should you or others at the county have questions. The 32,767 capacity limitation at a single precinct level is a function of the design and definition of the results database used by ERM. The data storage element used to record votes at the precinct level is a two byte binary field. 32,767 is 2 to the 15th power, which is the maximum number held by a two byte word (16 bits) in memory, where the most significant bit is reserved as the sign bit (a plus or minus indicator). Additionally, ERM precinct count level data is stored in a binary computer format known as two's complement. Data on ERM results reports are printed as the absolute value of the two's complement of the associated data in the ERM database. This means that once the 32,767 limitation is reached, additional incremental tallies of vote results would not be printed correctly (32,768 through 65, 536 would actually be represented as 65,536 to 32,768).
